

# TIETRONIX CERTIFIED AS A CMMI MATURITY LEVEL 2 ORGANIZATION

**Houston, TX – February 5, 2010** – Tietronix announces that the company has been assessed as a Capability Maturity Model Integration (CMMI) Maturity Level 2 organization.

The CMMI process improvement approach is defined by the Software Engineering Institute (SEI) at Carnegie Mellon University. CMMI allows organizations to improve their project performance by helping to establish and continually improve their internal processes. It also allows a company to integrate organizational functions, to set goals for improving those processes. Another benefit is that CMMI provides a point of reference for appraising current processes in the company as well as with clients.

Angela Anderson, who lead the Level 2 effort adds, “The organization's activities must be linked directly to its business objectives. The CMMI model allowed us to strengthen the capabilities of this organization to tackle more complex and challenging projects and to continue to deliver them on time and within budget to our clients.”

Michel Izygon, Chief Technology Officer at Tietronix states, “This achievement is a testament to our commitment to our clients in providing them with the highest quality software products and delivery levels that they expect. This is just the first step in our long-range plan to achieve a high maturity level and we look forward to the continued improvement of the services that we provide to our clients.”

**About Tietronix** – Tietronix specializes in software engineering, computer simulation, and serious games development. It is recognized for its focus in reliability, on-time delivery, and customer service. The company achieves these objectives through expert knowledge, best-in-class tools, and a proven software development methodology.
