

# TIETRONIX IS A CMMI MATURITY LEVEL 3 ORGANIZATION

**Houston, TX – January 22, 2016** – Tietronix is pleased to announce its reassessment at Capability Maturity Model Integration for Development (CMMI-Dev) Maturity Level 3 across the entire organization.

The CMMI process improvement approach is defined by the CMMI Institute at Carnegie Mellon University and is based on best practices derived from organizations worldwide. CMMI allows organizations to continuously improve their internal processes to make them more efficient, productive, and innovative. It also provides the capability for the organization to improve the predictability of their projects' cost, schedule, and quality.

Michel Izygon, Chief Technology Officer at Tietronix states, "This reassessment demonstrates Tietronix' commitment to continuous process improvement, which allows us to confidently provide our clients with on-schedule, quality software products within budget."

Since the assessments of Tietronix at CMMI Maturity Level 2 in February 2010 and CMMI Maturity Level 3 in January 2013, the company has continued to mature, improve, and standardize the organization's processes. Maintaining the CMMI Maturity Level 3 rating is evidence of the organization's dedication to process improvement, quality, and customer satisfaction.

**About Tietronix** – Tietronix specializes in software engineering, process automation, computer simulation, and serious games development. The company's quality objectives are reliability, on-time delivery, and customer service. Tietronix achieves these objectives through expert knowledge, best-in-class tools, and a proven software development methodology.
